

THE FUTURE IS BRIGHT

Get Solar Ready

The solar power revolution is here with many homes being built with, or retrofitting solar panels to their roofs.

Gerard's solar brackets are a unique solar mounting solution, following the lines of Gerard's roof tiles and fastening underneath them during tile installation. This results in a clean installation with no holes in the roof.

With options available for low profile and high profile Gerard roof tiles, ensuring your home is solar-ready is easier than ever.

Gerard's versatile solar brackets are suitable for use in wind zones up to and including Extra High.

How it Works

Solar brackets are installed over the lower course of tiles onto the battens, fastening through to the rafters for a secure hold. Once secured, the next course of tiles are laid over the solar brackets, protecting the fasteners from exposure to the elements.

Compatible profiles

LOW PROFILE SOLAR BRACKET

Senator
Rockport
Alpine
Aspen

HIGH PROFILE SOLAR BRACKET

Shake
Milano
Bond
Heritage
Classic

Whether you're ready to install solar panels now or want to future-proof your home, discuss your solar plan with the Gerard team today.
