

A NEW SOLUTION TO RE-ROOFING DECRAMASTIC TILES

CF Shake, Charcoal Blend overlay in Ruakaka

METAL TILE OVERLAY

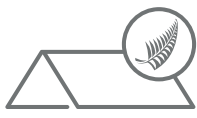

After many years of battling the elements your roof may be suffering from wear and tear. If you have a decramastic roof that is showing significant signs of age and degradation or starting to leak, it is probably time to think about looking for a replacement.

Generally, replacing an existing decramastic roof can be an expensive and time consuming exercise with the removal and disposal of the existing decramastic tiles as well as the potential asbestos testing.

But luckily there is another option, Metrotile's Concealed Fastening (CF) Shake and Shingle Profiles can go directly over your existing decramastic tile roof.

KEY BENEFITS

- ✓ **Save time** - Because this system can be installed in the wet or the dry, this means there will be less weather delays on your project and less time until your new roof is on.
- ✓ **Save money** - With the overlay method there is no additional costs for asbestos testing or roof removal.
- ✓ **Less disruption** - Because your roof isn't being removed your home is not being exposed to the elements, meaning you can continue to live in your home while work takes place.
- ✓ **Safe** - This method of re-roofing keeps asbestos in it's dormant, unharmed state and is completed after a strict assessment process.
