

# A NEW SOLUTION TO RE-ROOFING ASPHALT SHINGLES

CF Slate, Charcoal overlay in Auckland

## METAL TILE OVERLAY

After years of battling the elements your roof may be suffering from wear and tear. If you have an asphalt shingle roof that is starting to show significant signs of wear and tear or starting to leak, it is probably time to think about looking for a replacement.

Generally, replacing an existing asphalt shingle roof can be an expensive and time consuming exercise with the removal and disposal of the existing asphalt shingles.

But luckily there is another option, Metrotile's Concealed Fastening (CF) Shake, Shingle and Slate Profiles can go directly over your existing asphalt shingle roof.

## KEY BENEFITS

- ✓ **Save time** - Because this system can be installed in the wet or the dry, this means there will be less weather delays on your project and less time until your new roof is on.
- ✓ **Save money** - With the overlay method there is no additional costs for roof removal.
- ✓ **Less disruption** - Because your roof isn't being removed your home is not being exposed to the elements, meaning you can continue to live in your home while work takes place.
