

CF Slate, Charcoal overlay in Auckland

METAL TILE OVERLAY

A New Solution to Re-Roofing Asphalt Shingles

After many years of battling the elements your roof may be suffering from wear and tear. If you have an asphalt roof that is showing significant signs of age and degradation or starting to leak, it's probably time to think about looking for a replacement.

Generally, replacing an existing asphalt roof can be an expensive and time consuming exercise with the removal and disposal of the existing asphalt shingles.

But luckily there is another option, Gerard's Concealed Fastening (CF) Shake, Shingle and Slate profiles can go directly over your existing asphalt shingle roof.

Backed by BRANZ

Our CF profiles have been appraised to meet or exceed the New Zealand Building Code by BRANZ, an independent research organisation that uses an impartial evidence-based approach to improving the performance of the New Zealand building system.

Key Benefits

Save time - Because this system can be installed in wet or dry conditions, there will be fewer weather delays on your project and less time until your new roof is on.

Save money - With the overlay method there are no additional costs for roof removal.

Less disruption - Because your roof isn't being removed, your home is not being exposed to the elements, meaning you can continue to live in your home while work takes place.

PROFILES AND POPULAR COLOURS

Gerard offers three profiles for overlaying asphalt shingle roofs: CF Shake, CF Shingle, and CF Slate.

CF SHAKE

Weathered Wood

Barkwood

Charcoal Blend

CF SHINGLE

Weathered Wood
